

The Capstone

Ten weeks distilled into one system you design, build, and ship.
This is the proof of what you can do with AI as a core primitive
— not a side project.

REVEALED

MON • JUN 15,
2026

PLAN DUE

WED • JUN 17 • 11:59
PM

TEAM SIZE

3–4
CHALLENGERS

SHOWCASE

MON • JUN
29

01 — DISCOVERY

Pick a problem that is **technically hard**. The capstone is not measured by polish — it's measured by the ambition of what you attempted and how much of it you got working.

02 — THE SCHEDULE

10-minute live presentation

DELIVERABLE

Demo what you shipped. Live, in front of the room.

03 — PROJECT DIRECTIONS

Focus on technically challenging projects. Three directions worth chasing:

A

Combine ML with LLM applications

Pair classical machine learning models with LLM-driven systems so each does what it's best at.

B

A philosophically different take on agents

Rethink how agents are leveraged. For example: could a company survive if a team worked through one shared agent that did most of the work — and the team simply verified it?

C

One problem, many approaches

Take a simple problem and attack it from several angles — solving it multiple ways and comparing what actually wins.

04 — DELIVERABLES

DELIVERABLE 01

Project Planning Document

Your team's plan: the problem, the technical approach, scope, and who owns what.

DUE WED • JUN 17 • 11:59 PM

DELIVERABLE 02

Live Presentation

Ten minutes, live, in front of the room. Demo what you built and what you learned.

10 MIN • MON • JUN 29

Build something that proves what you can do.
Start now.

GAUNTLET // CAPSTONE
KICKOFF BRIEF • 2026
